

Control center

Multi-agent software engineering workflow

Ready

Pipeline

- User Requirement
- Coder
- Reviewer
- Tester
- Executor
- Report
- End

Workspace

FastAPI backend on 127.0.0.1:8000

Interactive Streamlit review surface

Built for code, tests, and repair loops

CodeReviewCreW

A professional control surface for generating code, reviewing it, running tests, and inspecting automatic repair iterations.

User Requirement → Coder → Reviewer → Tester → Executor → Report → End

Current signal

Ready

One requirement goes through coder, reviewer, tester, executor, and report stages.

Run a workflow

Choose a demo or enter a custom Python requirement. The request is sent to the backend only when you run it.

Demonstration case

Odd or Even

Programming requirement

Create a Python function named `check_even_odd` that returns 'even' for even numbers and 'odd' for odd numbers.

▶ Run agents

System overview

What this workspace is optimized to show

- Deterministic demo cases for clear walkthroughs
- Review findings with quality scoring
- Generated pytest coverage and execution output
- Full repair timeline when the first attempt fails
